Tender text

TS 8 security handle

The security handle can be fitted to all TS 8 enclosures instead of the normal handle system. The system is distinguished by a flexible access option.
The 3 x number code ensures that the enclosure can be accessed without needing a key. The code can be reset when the door is open. The code can only be reset if the original code is known and this ensures that it is impossible to change the code inadvertently.
The master key function is an alternative access option. The handle can be used to open the door, irrespective of the number code, via the semi-cylinder. It can be used with 40 or 45 mm semi-cylinders as per DIN 18 254.
The simple retrofitted installation makes the handle optimally suited for use with ISP and ASP applications.
