Making safe contacts without using any tools

Little things can have great impact on daily tasks. Who hasn't had to quickly install a PE terminal or a non-protected voltage tap in a switching or control system? Now this can be done quickly, safely and without any tools using new push-in conductor connection clamps.

- Completely tool-free conductor connection
- Completely maintenance-free, as the clamping screw attachment does not need to be tightened
- Large clamping range. All common types of conductors can be connected
- Fully insulated all round and with standard marking systems for labelling
- Optimal contact by breaking the oxide layer
- International approvals
