

Keep Your Machines, And Your Business, Running.

Scheduled maintenance will extend the service life of your Perforex machine.

Preventative maintenance is frequently overlooked as part of a factory's management program. Greater commitment to a schedule can prolong equipment life and reduce potential downtime and costs due to lost production.

The benefits of an established preventative maintenance schedule include:

- Reduction in equipment downtime and major repairs
- Cost reduction in emergency repairs and replacements
- Improved product quality and safety for employees
- Improved machine performance
- Longer product service life

For more information about Rittal's Preventative Maintenance Program visit rittalenclosures.com/service or call 800-477-4000 (option 3).

Rittal's preventative maintenance program for Perforex machining centers offer:

- Customer can schedule maintenance visits as needed or take advantage of a 3-year preventative maintenance contract.

All visits will include...

- A Perforex machine evaluation, that includes a mechanical, pneumatic and electronic inspection by highly qualified, factory-trained technicians
- Routine adjustments, alignments, lubrication and replacement of common wear parts
- A report of your machine's condition and recommendations for replacement part(s) and future service needs

3-year contract will include a yearly maintenance plus...

- Discounted yearly rate
- Priority service and scheduling
- 2-hours per year of free on-site training
- Free software updates as needed
- 1 additional year of warranty if PM contract is purchased at the same time as the Perforex machining center purchase
