

Rittal Ltd UK

Vacancy – Applications Engineer (Chillers)

Rittal is known as the market leader of enclosure systems for industrial & process automation and IT solutions. Despite being a business of circa €2bn turnover and c. 10,000 employees, one of our lesser known competencies is as a manufacturer of industrial and IT chillers from 5kW to 500kW. With the support of our factory in Italy and our team of cooling specialists in the UK, Rittal are further investing in this growth area.

We are seeking an experienced and qualified engineer/technician to be a key player in our drive for market growth in chillers for industrial processes and data centres. The position is based at our Sales and Logistics headquarters in Rotherham, South Yorkshire. The position will involve the interpretation of customers' specifications and providing them with high quality solutions and commercial proposals: this will also require close working with the relevant production companies within the Rittal Group.

You will be an experienced and qualified refrigeration engineer or technician familiar with refrigeration circuits and the markets of chillers and associated equipment. You will be conversant with chiller applications and associated thermal dynamics.

If you are interested in the role, please e-mail jobs@rittal.co.uk with your details.
