

SPS 2021 Press kit

SPS 2021 Content2go: New technology from Eplan, Rittal and German Edge Cloud

Industry is currently undergoing unprecedented change due to the digital transformation, as well as edge and cloud computing. **Eplan, Rittal and German Edge Cloud** will be providing responses to these megatrends.

We will be showing you new solutions and technologies for all stages of industrial value creation covering **engineering, sourcing, manufacturing to operations**, i.e. from the data-supported optimisation in panel building and switchgear manufacturing to systems operation in industrial manufacturing.

Interested? You can find all the **top stories** in this press kit.

Kind regards

Eplan, Rittal and GEC at the SPS 2021 Technologies for every stage of industrial value creation

Eplan, Rittal and German Edge Cloud (GEC) will be showing the latest technology solutions across the entire industrial value chain at the SPS 2021, covering engineering, sourcing, manufacturing through to operations. These include solutions for data-supported optimisation in panel building and switchgear manufacturing, including the operation of plants.

Rittal ePocket: The digital wiring plan pocket for operation

Rittal ePocket eliminates paper through digital access to system documentation. And this is just the beginning. Rittal and Eplan are extending the benefits of the digital twin in the company. The future: Operators, planners, switchgear manufacturers and maintenance staff will remain in permanent contact with one another and in business with each other in new ways, even if production is running.

Rittal RiPanel Configure enclosures easily

Can complex products such as enclosure systems be planned easily in 3D, configured individually, and ordered quickly? With Rittal's new RiPanel enclosure configurator, customised enclosures, including accessories and price information, can also be configured and ordered online. The new version also provides live price information for transparency.

Eplan eManage Cloud service expanded

Projects from the Eplan platform can be uploaded, shared and managed in the cloud environment, even with the free version of eManage. Eplan offers added value with the full version of eManage: Master data can be called up in the cloud, accompanying documents are now accessible and performance increases with additional capacity. The focus is on collaboration between OEMs, system integrators, engineers and operators.

German Edge Cloud 2 x Edge Cloud IIoT

German Edge Cloud presents edge cloud-centric IIoT platforms: As a member of the F.L.G., and as part of the Smart Electronic Factory as ONCITE powered by IBM.
