# Industrial Internet of Things.

## Concepts – Products – Services.

### **Fast, uninterrupted, automated production**

Ever shorter product life cycles and growing order complexity are revolutionising the demands placed on modern manufacturing. The future-proof factory uses intelligent networking for its production processes. This creates considerable potential for process optimization, enables real-time transparency and enhances production availability.

### **Forward-looking solutions and demand-based smart services**

Rittal is driving the development of IIoT with its own solutions and smart services: Enclosure monitoring sensors, smart cooling solutions and cloud computing support intelligent data analysis. In this way, operating, service and energy data for all enclosure and cooling units is available in real time. Rittal combines this real-time data management with expert knowledge and cutting-edge smart services that are tailored to specific customer needs.

**In this way, we help companies to boost the reliability of their production sites, optimize energy consumption and drive digitalization forwards.**

### **Award-winning**

The Rittal IoT interface won Silver in the Golden Mousetrap Awards 2019

### Sensor applications

- Data supply and networked communications as the basis for predictive maintenance
- Rittal IIoT solutions for the entire shop floor

Page 4-5

### Condition monitoring for enclosure and process cooling

- Networking and digitalization of Rittal cooling solutions
- Continuous monitoring boosts system availability

Page 6-7

### IIoT bundles for rapid access to the Internet of Things

- IIoT interface, sensors and hardware tailored to your specific application
- Easily integrated into IoT, SCADA, MES and ERP systems

Page 8-9

### Real-time data available on site with the Edge Data Center

- For rapid implementation of a flexible IT environment to support IoT applications in an industrial setting
- Digital processes are protected by a high-MTBF IT infrastructure

Page 10-11

### Smart Service for intelligent maintenance of your cooling units

- Visualizes cooling solution behaviour for reliable, early detection of critical faults
- Data-based error diagnosis for fast troubleshooting

Page 12-15

# Rittal IIoT solutions in practice.

Your end-to-end benefits with intelligent products and smart services.

Industry 4.0 scenarios such as predictive maintenance are based on data supply and networked communications. This relies on IoT-compatible devices that are equipped with the relevant communication capabilities.

Rittal's new IoT interface creates the basis for optimum integration of cooling units, chillers and sensors into Industry 4.0 applications. This facilitates end-to-end communications from the sensor to the cloud as well as connection to higher-level monitoring or energy management systems. Reap the benefits with Rittal IIoT solutions for the entire shop floor: From sensors for enclosure monitoring, condition monitoring of enclosure and process cooling and edge data centres to our comprehensive range of smart services.

# Condition monitoring

## Enclosure and process cooling

A failure in the enclosure and process cooling system can quickly lead to unplanned plant shutdowns and expensive downtime and consequential costs.

In conjunction with the IoT interface, all Rittal chillers in the Blue e+ series and all cooling units in the Blue e and Blue e+ series can now be retroactively networked and digitalized without affecting the automation logic. Plug and run: The IoT interface is quickly and conveniently configured and commissioned via the integral web server without the need for programming. This digital retrofit supports the latest condition monitoring technology and will significantly boost your system availability.

---

### Your advantages

- Continuous monitoring of temperature levels and temperature accuracy
  - Prompt action if a threshold value is exceeded
  - Automatic notification of cooling unit and chiller malfunctions
  - Temperature logging and energy efficiency analyses
  - Avoidance of downtime costs and consequential damage
  - Remote access: Remote configuration of device parameters
- 

**Operating & monitoring**

**IoT, SCADA, MES and ERP systems**

### Further information

The Blue e IoT adaptor (Model No. 3124.310) is additionally required for networking cooling units in the Blue e series.

## Sensors for enclosure monitoring

Nowadays, factories rely on the use of smart components. Rittal sensors facilitate reliable monitoring of a wide range of switchgear parameters.

---

### Your advantages

- Enhanced operational reliability
  - Enhanced system availability
  - Early detection of possible failures
  - Easily integrated into IoT, SCADA, MES and ERP systems
-

## Rittal IloT bundles

Rittal IloT starter bundles contain everything you need for rapid access to the Internet of Things:  
**IoT interface, sensors/hardware tailored to your specific application and connectivity**

### IloT bundle – Humidity monitoring

Enclosures sited outdoors are often exposed to temperature fluctuations and high levels of humidity, leading to the formation of condensation. The IloT "humidity monitoring" bundle allows you to monitor the relative humidity inside the enclosure from anywhere in the world.

### IloT bundle – Fire detection

Damaged and defective conductors increase the risk of fire in switchgear systems. The IloT "fire detection" bundle ensures that fires are reliably detected as they start to develop.

### IloT bundle – Temperature monitoring

Temperatures are a critical indicator of the service life and performance of electronic components. The IloT "temperature monitoring" bundle allows you to monitor temperature readings in switchgear and machine beds from virtually anywhere in the world.

### IloT bundle – Door monitoring

Enclosures protect the devices inside, and also protect humans from electric shocks. To permanently guarantee both these functions, enclosure doors should never be left open during regular operation. The IloT "door monitoring" bundle permanently monitors the door status (open / closed).

### IloT bundle – Access control

Access to control cabinets with safety-critical and sensitive electronics must be limited to authorized individuals. Unauthorized access can soon cause serious damage. The IloT "access monitoring" bundle allows you to centrally administer access to the enclosures via the network, with no need for keys or lock systems.

# Rittal Edge

## Real-time data available on site.

Digitalization is transforming your production. Industry 4.0 is paving the way for digital twins, predictive maintenance and smart factories.

Sensors in machines and their components are interlinked, enabling data processing and communication in real time.

You can optimize your production processes by ensuring that all data is analyzed as quickly as possible. The Edge Data Center allows you to manage this information and make it available in real time to improve product quality, traceability, and availability.

---

### Your advantages

- Rapid implementation of a flexible IT environment for IoT applications in an industrial setting
  - Standardized solutions for cost-effective digitalization incorporating both OT and IT components
  - Minimal latency, because data is processed at the point of origin
  - Digital processes are protected by a high-MTBF IT infrastructure
  - Easily scalable for different sizes and cooling outputs
- 

### Fast configuration

The Rittal Edge Data Center is a platform enabling the rapid configuration of solutions for flexible use in any IT environment. The assemblies are available in various output categories and can be combined to create a ready-to-use solution in next to no time. This makes it much faster for companies to implement a data centre with optimum operating efficiency.

Use the Edge Data Center Configurator to help you configure complete turnkey private cloud solutions with ease.

Configurator

# Rittal Smart Service

## Maximum availability through preventive maintenance.

Rittal Smart Service visualizes the behaviour of your Blue e+ series cooling units and chillers, helps you identify maintenance requirements via remote monitoring, guarantees early detection of critical faults, and uses data-based error diagnosis for swift troubleshooting.

Create energy efficiency reports, analyze cost and CO<sub>2</sub> savings and access troubleshooting recommendations via the Rittal Smart Service Portal, which uses real-time data.

Event-based recommendations from Rittal service experts, coupled with analysis of your equipment data using manufacturer know-how, provide the ideal basis for predictive maintenance.

---

### Your advantages

- Asset management and control of maintenance measures
- Visualization of device data via the web portal (condition monitoring) including visualization and monitoring of device data via the Smart Service Portal (condition monitoring)
- Access to operating and temperature characteristics
- Energy efficiency reports and analyses
- Situational recommendations based on manufacturer expertise

---

### Your benefits

- Enhanced machine availability
  - Reduced servicing costs, thanks to requirement-driven maintenance
  - Fast problem analysis and troubleshooting using remote diagnosis
  - Enhanced service efficiency
- 

**Blue e+ generation**

## iNNOVO CLOUD

### Smart Service Cloud

- Unidirectional, encrypted data transmission
- Certified Cloud in Germany

### Data analyses

Based on manufacturer expertise

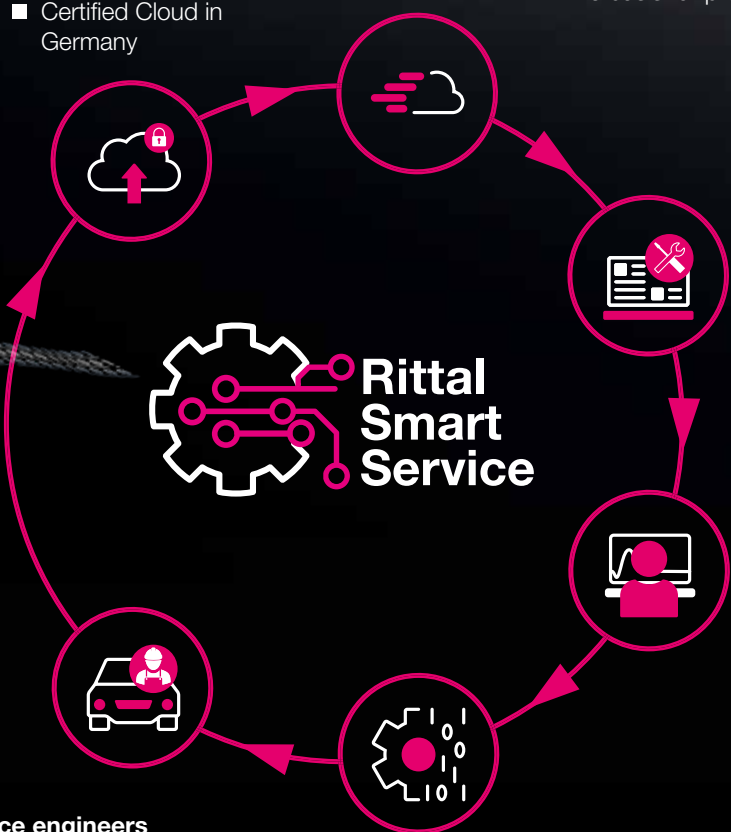

- Development of intelligent algorithms
- The basis for preventive maintenance

IoT interface

## Rittal Smart Service

### Smart Service Portal

- Overview of networked devices (asset management)
- Access to operating data
- The latest messages and recommended actions
- Energy consumption

### Monitoring by Rittal service experts

- Continuous monitoring of device statuses in real time
- Remote diagnosis with manufacturer know-how
- Situational advice on optimum measures

### Service engineers

- Respond on demand
- Ensure fast, efficient on-site troubleshooting

### Automated handling

- Identification of the correct spare part
- Initiation of service measures

# Rittal Smart Service – Individual and targeted.

You can opt into our Smart Service at any time and flexibly adapt it to suit your requirements. In this way, we tailor the appropriate service level and range of services to each individual customer. Rittal Smart Service incorporates a range of different service levels which build on one other to become ever more comprehensive.

**Level 3**

| Smart Maintenance Agreement   |                           |                            |
|---|---------------------------|----------------------------|
| Smart Monitoring  | Modular Service Agreement | Automated Service Handling |
| <p>This level combines the advantages of Remote Diagnostic Service and Smart Monitoring with a conventional service agreement. Individual maintenance measures need not be ordered separately, as they are agreed in your individual service agreement.</p> |                           |                            |

**Level 2**

| Smart Monitoring  |   |
|---|---|
| Remote Diagnostic Service   | Equipment Monitoring/Service Management by Rittal |
| <p>Rittal service experts monitor your networked devices connected to the smart service and proactively notify you of any critical faults and essential measures for maintaining availability. Any essential maintenance measures are ordered separately by you, so you remain in full control of the measures implemented and associated costs at all times.</p> |   |

**Level 1**

| Remote Diagnostic Service  |                  |   |  |
|--|------------------|---|--|
| Access to your personal dashboard  | Asset management | Visualization of device data including monitoring       | Energy efficiency reports and analyses |
| Situational recommendations based on manufacturer expertise  |                  | Advice and error diagnosis from the Rittal Service team |  |
| <p>You can access the Smart Service Portal including the visualization of all your networked devices and device statuses, and generate energy efficiency analyses. You can also consult Rittal service experts for fast, remote diagnosis, and receive optimum, bespoke advice in addition to situational recommendations.</p> |                  |   |  |

## AIRBUS

"If the cooling of our simulation computers were to fail, we would not be able to carry out the tests. The IoT interface in the Blue e+ cooling units allows us to scan all statuses in real time."

Volker Jacobs,  
Head of Functional Testing Group  
at Airbus

"Monitored climate control with Blue e+ cooling units from Rittal has enabled us to increase our system availability."

Henning Möhrmann,  
Team Coordinator at DMK Group

"The smart Blue e+ cooling units dovetail neatly with our concept. Interlinking our machines enables us to control production using real-time data, thereby improving maintenance intervals and energy efficiency. We were impressed by the Rittal Smart Service offer and the option of incorporating the Blue e+ family of devices into our own tool the@vanced."

Dr.-Ing. Dontaus Weber,  
Head of Innovation & Industry 4.0  
at Kampf Slitting and Winding  
Technologies
