Rittal – The System.
Faster – better – everywhere.

VX25 Enclosure System

Technical documentation
Load information
1. General remarks

Based on the results of in-depth testing and customer feedback, we hope that this technical documentation will provide you with plenty of useful tips and assistance for the transport and siting of enclosures. The technical descriptions for the various loading options with the VX25 enclosure system are not warranted properties, and we are unable to accept any liability in this regard. Additionally, Rittal reserves the right to extend or modify this technical documentation as and when necessary.

To aid understanding of the load specifications given in Newtons, here is the conversion formula for converting into kilograms.

\[ F \ [N] = m \ [kg] \cdot g \ [m/s^2] \]

Example: 9.81 N = 1 kg \cdot 9.81 m/s^2

Should you have any further questions or suggestions on the points raised in this technical documentation, please get in touch with your Rittal specialist advisor.
2.1 Transport by crane

All VX25 enclosures are suitable for transporting by crane, either as free-standing enclosures or as bayed suites.

Eyebolt 4568.000
For transporting enclosures by crane (based on DIN 580).

Combination angle 4540.000
Combination angles must be used when transporting bayed enclosures by crane, to ensure the optimum distribution of tensile forces.

With eyebolts
Individual enclosures are safely transported using the eyebolts. For symmetrical loads, the following maximum permissible overall loads apply:
- \( F \leq 90° \) cable pull angle 13600 N
- \( F \leq 60° \) cable pull angle 6400 N
- \( F \leq 45° \) cable pull angle 4800 N
Transport variants

2.1 Transport by crane

With combination angle

For the enclosure combination with internal baying brackets, 8617.500 (3 per vertical section) and combination angles shown here, the load capacity with a cable pull angle of 60° is as follows:
F1 = 7000 N
F2 = 7000 N

For the enclosure combination with internal baying brackets, 8617.500 (3 per vertical section) and combination angles shown here, the load capacity with a cable pull angle of 60° is as follows:
F1 = 7000 N
F2 = 14000 N
F3 = 7000 N
2.2 Transport by fork-lift truck
When transporting individual and bayed enclosures, please take care to ensure that the base/plinth trim panels are fitted, and loads are restricted to the immediate vicinity of the base/plinth corner pieces.

Transport of individual enclosures

Max. 15000 N

Transport of bayed enclosure suites

Note:
– For bayed enclosure suites, one base/plinth trim panel should be folded over and fitted in such a way as to create a stable bayed connection in the base/plinth zone.
2.2 Transport by fork-lift truck
Transport of bayed enclosure suites
For the enclosure combination with internal baying brackets, 8617.500 (3 per vertical section) shown here, the following load capacities are supported:

<table>
<thead>
<tr>
<th>Load Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Max. 15000 N</td>
</tr>
<tr>
<td>Max. 15000 N</td>
</tr>
<tr>
<td>Max. 7000 N</td>
</tr>
<tr>
<td>Max. 14000 N</td>
</tr>
<tr>
<td>Max. 7000 N</td>
</tr>
</tbody>
</table>

2.3 Transport on castors
Transport individual and bayed enclosures
Transport castors with locks 8100.700
(only in conjunction with base/plinth)
Supply includes:
4 twin castors, 2 x with, 2 x without locks
Max. dynamic load:
- Individual enclosure: When using 4 castors = 3000 N
3.1 Siting of enclosures
Siting on levelling feet 2859.000
With a static load, the maximum overall admissible load is
$F = 14000 \text{ N}$
Configuration variants

4.1 Enclosure panels

Side panel
Provided the Rittal assembly components offer adequate protection against tipping over, the following maximum static loads apply to enclosures:

- Side panel
  \[ F = 900 \text{ N} \]
- Side panel, hinged (hinge for side panel 8106.260)
  \[ F = 200 \text{ N} \]

The 180° opening angle allows unrestricted access. May be mounted from both inside and outside the enclosure. Simply exchange the three enclosure panel brackets for hinges.

Note:
Hinge mounting is only possible in the vicinity of the rear panel

Rear panel
Provided the Rittal assembly components offer adequate protection against tipping over, the following maximum static loads apply to enclosures: \[ F = 900 \text{ N} \]
4.1 Enclosure panels

Door with 130° or 180° hinge

Provided the Rittal assembly components offer adequate protection against tipping over, the following maximum static loads apply to enclosures: $F = 900\,\text{N} \ (130°/180°)$
Enclosure system VX25

Configuration variants

4.1 Enclosure panels

Mounting plate

All mounting plates are suitable for heavy loads, thanks to their exceptionally stable and functional design.

Mounting position: Flush with the enclosure frame
F = 6000 N

Mounting position: Set forward from the enclosure frame
F = 5000 N

Mounting position: Plus 20 mm, set back behind the enclosure frame
F = 2500 N
4.1 Enclosure panels

Mounting plate

Installation kit for back-to-back mounting plates 8617.360
F = 2500 N per mounting plate

Partial mounting plate

The load information for partial mounting plates refers solely to mounting directly on the frame section using the Rittal assembly components provided especially for this purpose.

</tbody>
</table>

\( ^1 \) For two installed swing frames, an overall load of 1000 N per swing frame applies.

**Note:**

When using the 180° hinge (Model No. 8619.050), a maximum load of 1500 N is supported.
4.3 Rail systems

Punched section with mounting flange, 18 x 64 mm, 23 x 64 mm, 23 x 89 mm

Variable, with rows of holes for universal interior installation or partial assembly. Simply locate into punchings and screw-fasten.

**Punched section with mounting flange 18 x 64 mm**

For enclosure width/height/depth mm  | F [N]  | Model No.
---|---|---
300 | 2400 | 8617.000
400 | 2400 | 8617.010
500 | 2400 | 8617.020
600 | 2400 | 8617.030
800 | 1800 | 8617.040
1000 | 1400 | 8617.050
1200 | 1200 | 8617.060

1) The maximum admissible overall load capacity of the enclosure must not be exceeded. Force data only applies to a symmetrical arrangement.

**Punched section with mounting flange 23 x 64 mm**

For enclosure width/height/depth mm  | F [N]  | Model No.
---|---|---
300 | 2400 | 8617.100
400 | 2400 | 8617.110
500 | 2400 | 8617.120
600 | 2400 | 8617.130
800 | 1800 | 8617.140
1000 | 1400 | 8617.150
1200 | 1200 | 8617.160
1400 | 800 | 8617.170
1600 | 800 | 8617.180
1800 | 800 | 8617.190
2000 | 700 | 8617.200
2200 | 650 | 8617.210

1) The maximum admissible overall load capacity of the enclosure must not be exceeded. Force data only applies to a symmetrical arrangement.

**Punched section with mounting flange 23 x 89 mm**

For enclosure width/height/depth mm  | F [N]  | Model No.
---|---|---
400 | 2400 | 8100.730
500 | 2400 | 8100.731
600 | 2400 | 8100.732
800 | 1800 | 8100.733

1) The maximum admissible overall load capacity of the enclosure must not be exceeded. Force data only applies to a symmetrical arrangement.

**Punched section with mounting flange, 14 x 39 mm**

For door width mm  | F [N]  | Model No.
---|---|---
400 | 500 | 8619.700
500 | 500 | 8619.710
600 | 500 | 8619.720
800 | 260 | 8619.730
Enclosure system VX25

Configuration variants

4.3 Rail systems
Punched rail 18 x 39 mm
For variable, individual interior installation of the enclosure frame on the inner mounting level, may also be used in conjunction with other punched sections. Prepared at the rear to accommodate cable clamps for optimum cable routing in the enclosure.
