Customer information – “REACH”

What is REACH?

REACH is the abbreviation for Registration, Evaluation, Authorisation (release) and restriction of Chemicals and stands for a law on chemicals within the EU.

The core aspects are as follows:

- Clear regulation of the registration and approval of "chemicals":
  All "substances" (chemicals) manufactured / imported in quantities of one tonne per year or more must be registered by the manufacturers / importers. The substances must be exclusively registered with the European Chemicals Agency (ECHA).

- Reversal of the burden of proof to the manufacturer of "chemicals":
  The manufacturer must "actively" inform its customers about the use of "Substances of Very High Concern" (SVHC List) within the meaning of REACH, and/or offer alternatives.
  This means that Rittal must also be "actively" informed by its suppliers and Rittal must "actively" inform its customers afterwards.

- Maxim: No data - No market (i.e. No registration - No marketing).

What does this mean for Rittal?

- Rittal neither manufactures substances / preparations nor imports them from outside the EU. The only exceptions are preparations (touch-up sticks, paint, sprays etc.) which Rittal places on the market as dealer. The relevant safety data sheets of these preparations are stored on the Internet and are available for download.

- With regard to the manufacture, Rittal is only "Downstream user", i.e. our products are manufactured items and not substances / preparations within the meaning of REACH, and they do not release such substances / preparations during their application. Therefore, the registration obligation does not apply to our products.
What are our activities?

- Rittal has included all currently known “Substances of Very High Concern” (SVHC List) into a Technical Delivery Conditions AA-TL-035 “Rittal Prohibition and Declaration List”. This Rittal AA-TL-035 contains all currently valid international regulations and laws that are applicable to our products as well as – if applicable - banned substances of our customers' prohibition lists, and they are continuously reviewed. All suppliers of Rittal are required to provide a binding confirmation that the aforementioned Technical Delivery Conditions are complied with. According to our suppliers we confirm that none of the substances specified in the ECHA SVHC list are included in our products or do not exceed a maximum threshold limit value. With regard to all new parts, we explicitly require our suppliers to confirm the conformity with our Rittal AA-TL-035 as part of the approval within the scope of sampling.

If, however, our examinations and/or any information provided by our suppliers indicate the non-conformity of the use of substances for which declaration is required or which are banned, we will immediately check alternatives and actively inform you as our customers.

Based on the aforementioned information / activities and according to the current state of our knowledge we confirm that our standard products as well as any preparations which we place on the market as dealer comply with the requirements of the REACH directive 1907/2006/EG and other applicable documents.

Should your inquiry about banned substances refer to substances other than those included in our Technical Delivery Conditions, we will review these substances within the scope of our regular updates and included them into our list, if applicable.
