# SK 3311.238 Liquid Cooling Packages

State: 2025-07-05 (Source: rittal.com/ca-en)

### SK 3311.238 - Liquid Cooling Packages LCP Rack CW

For the highest density installations, these LCP Rack units totally control the air path for efficient cooling. The LCP Rack CW is a closed loop system and units are scalable from as low as 10kW to as high as 60kW with all the most requested stops in between. These new, more powerful units in the line maintain the 12-inch wide footprint – making it possible, in some situations, to double the cooling capacity without taking up additional floor space. The unit's high-efficiency fans have been moved to the front of the LCP – on the cool side away from maximum heat – which will extend the life of the fans. Water connections are available at either the top or bottom of the unit.

#### **Features**

Model No.	SK 3311.238
Benefits	Maximum energy efficiency due to EC fan technology and IT-based control
	Minimal pressure loss at the air end, which in turn minimizes the power consumption of the fans
	The separation of cooling and enclosure prevents water from entering the server enclosure
	Fan modules configurable as n+1 redundancy.
	Targeted cooling output thanks to modular fan units
	By using high water inlet temperatures, the proportion of indirect
	free cooling is increased, which in turn reduces operating costs
	Optimum adaptability due to dynamic, continuous control of the
	cold water volume flow
	Minimal pressure loss at the air end, which in turn minimizes the
	power consumption of the fans
	Touchscreen display may be retrofitted.
