# DK 7979.440 - PDU managed

High-end IT rack power distribution with energy measurement and monitoring functions for each individual output slot. Input with CEE connector (16 A/32 A) with C13 and C19 outputs.

## Features

Model No.	DK 7979.440
Product description	High-end power distribution in a compact design for IT network and server racks. Depending on the design, they come with an extensive range of management functions for energy measurement and monitoring.
Benefits	<ul style="list-style-type: none"><li>For vertical mounting, it may be attached in the zero-U space of the Rittal VX IT or TS IT rack with no need for tools</li><li>Colour coding of phases and fuse circuits (L1=pink, L2=black, L3=white)</li><li>Tool-free divider kit for VX IT</li><li>PDU self-supplied, no external power supply required</li><li>Measurement accuracy <math>\pm 1\%</math> (kWh) to EN 62 053-21</li><li>Programmable startup behaviour following voltage recovery (on/off/last status)</li><li>Programmable switching behaviour (time/programmable logic)</li><li>Integral real-time clock with battery buffering (max. 10 years, battery replaceable)</li><li>Integral electromagnetic buzzer for acoustic alarms</li><li>Adjustable limit values (warning/alarm) for current, voltage, output, individual settings for each output slot</li></ul>

## Technical specifications

Display/controller unit in the PDU enclosure rotatable through 180° and replaceable  
Integral, fully-redundant power pack, power supply from all phases  
Error-tolerant PDU power supply redundant across all phases  
Voltage V, current A, frequency Hz  
Active power, active energy, apparent power, apparent energy  
Power factor (cosPhi) and phase angle  
Zero conductor current measurement/load imbalance detection  
Fuse monitoring for PDUs with integral fuse  
Bright TFT display, 128 x 128 pixels (RGB) with back-lighting and energy-saving mode to display output data and basic PDU configuration  
Position sensors for display rotation and correct PDU representation on the website  
Multi-colour LEDs (green/amber/red) to indicate switching states and limits per individual output slot  
Power LED to indicate voltage  
Power-saving design, minimal intrinsic power consumption

---

## Material

Aluminium section, black anodised  
Slots: Plastic

---

## Supply includes

Assembly parts

---

## Options

Type 3 overvoltage protection with interchangeable arresters while operational, with status monitoring, suitable for integration into PDU enclosure  
Residual current measurement (type B) per infeed/phase/fuse  
Monitoring of the optionally available overvoltage protection  
CMC III CAN bus sensors may be connected for ambient monitoring, max. 16 sensors  
Other enclosure colours are available

Measurement functions, description	Emergency power supply to PDU web server via PoE, sequential disconnection of the outputs Switching function per output slot Avoids overload peaks: Sequential activation of the outputs following voltage recovery Relay states are saved even in the event of a power failure Bistable relays: Low current consumption and high switching capacity, also suitable for higher starting currents up to max. 300 A Grouping: Joint switching of multiple outputs Measurement per phase or infeed Plus measurement per output slot Powerful CPU (ARM Cortex A8) Digital input (floating contact) Additional alarm output/relay output (changeover contact)
Dimensions	Width: 44 mm Depth: 70 mm Length: 1,895 mm
No. of sockets and type	36 x C13 / 6 x C19
Sockets	36 x C 13 6 x C 19
Rated operating voltage	400 V (AC)
Rated current (max.)	16 A
Power consumption	11 kW
Infeeds	Qty.: 1 Phases per infeed: 3~
Length of connection cable	3 m
Type of electrical connection	CEE

Rittal PDU managed Model No.: DK 7979.440

Compact power distributor for deployment in IT server and network enclosures. Vertical installation in the Zero-U space using the supplied universal brackets for common IT racks. Suitable for tool-free quick assembly in the Rittal VX IT and TS IT racks using the special supplied plug-%-play fastener. Robust aluminium housing with permanently mounted output slots, IEC 60320/C13 or IEC 60320/C19 as well as CEE 7/3 (earthing-pin) and BS 1363 (UK), depending on the type (see below for details). The IEC C13 / C19 output slots can be protected with a lock against unintentional removal of the connectors. Unused slots can be closed with slot covers available as accessories. This precludes an unintentional overloading of individual phases and circuits. The fuse circuits and phases are colour-coded for multiphase PDU variants. A fixed-mounted connection cable with IEC C20 or CEE connector appropriate for the variant makes the PDU available for immediate deployment.

The PDU managed has extensive measurement and switching functions for the current and power monitoring of each output slot. The integral TFT colour display enables the basic configuration setting and quick access to the electrical consumption data. Two Gigabit network interfaces and the integrated Web server allow remote access and data transmission using various protocols. The consumption parameters can be forwarded to a DCIM software via SNMP, OPC-UA, Modbus/TCP. For monitoring the ambient parameters, up to 16 sensors (for example temperature / humidity / smoke / leakage / access) as well as VX IT and TS IT handle systems from the CMC accessories program can be connected to the CAN sensor interface.

Optionally, an overvoltage protection module (type3) can be placed on the PDU at the infeed; the overvoltage protection module is equipped with arrestors that can be replaced during operation. For intelligent PDUs, the status is monitored via the network interface, the PDU basic has a floating alarm contact for monitoring the overvoltage protection. As option, intelligent PDU variants can be supplied with an AC/DC sensitive residual current measurement (RCM type B) with up to 6 measurement points. This changes the PDU length and the number of installed slots for each standard length.

The warranty for proper operation is 24 months.
