HD 4000.309 - HD supporting structure with levelling

Supporting structures possess closed cross-sections and continuously welded seams to guarantee absolute impermeability. The round profile helps to avoid the common problem of collecting dirt, particularly with horizontal surfaces.

Features

Model No.	HD 4000.309
Benefits	The guaranteed floor clearance of the enclosures ensures easy wet or dry cleaning The width supports the installation of individual supporting structures underneath bayed VX25 and HD system enclosures and HD compact enclosures
Material	Stainless steel 1.4301 (AISI 304)
