# AS 4050.095 - RiPanel Processing Center

The RiPanel Processing Center from Rittal, in conjunction with EPLAN software, offers a seamless solution for the efficient management of production and machine orders. The production management tool ensures comprehensive process optimisation for complete planning confidence. Throughput times, errors and costs are significantly reduced. The production management tool comprises two modules: the layout tool and the job management module. The library integrated into the layout tool already contains a selection of 2D-modelled components from Rittal and may be extended as required. The job management module supports the management of production orders for registered Rittal machines.
