SK 3313.250 - Liquid Cooling Package LCP Rack CW, LCP Rack CWG

Cooling via high-performance compact impellers. The LCP draws in air from the side at the rear of the server enclosure and blows the cooled air back into the front part of the server enclosure from the side.

Features

Model No.	SK 3313.250
Version	CWG
Benefits	Maximum energy efficiency due to EC fan technology and IT-based control
	Minimal pressure loss at the air end, which in turn minimizes the power consumption of the fans
	Control of the server inlet temperature
	Redundant temperature sensor integrated at the air end
	Optimum adaptability due to dynamic, continuous control of the cold water volume flow
	By using high water inlet temperatures, the proportion of indirect
	free cooling is increased, which in turn reduces operating costs
	Targeted cooling output thanks to modular fan units
	Fan modules configurable as n+1 redundancy.
	Standard 3-phase connection for electrical redundancy
	The separation of cooling and enclosure prevents water from entering the server enclosure
	A maximum floor area of 0.36 m² for all cooling services
	Improved heat recovery due to high water return temperatures whe
	using the LCP CW glycol variants, for example in conjunction with a heat pump
	Optimum access for maintenance and service from the front and
	the rear
	Tool-free fan module replacement
Function principle	The LCP draws in the air at the sides at the rear of the server enclosures, cools it using high-performance compact impellers, and blows the cooled air back into the front part of the server enclosure
