SK 3313.290 - Liquid Cooling Package LCP Rack DX

Rack-based cooling of one to two IT racks. Continuous adjustment of the cooling output provided by output-controlled compressors in the Rack DX LCP (evaporator). An external condenser is required to operate the unit.

Features

Model No.	SK 3313.290
Version	DX
Benefits	Maximum energy efficiency due to EC fan technology and IT-based control
	Minimal pressure loss at the air end, which in turn minimizes the power consumption of the fans
	Control of the server inlet temperature
	Due to the speed-regulated compressor, the cooling output adapts to the actual requirements
	Redundant temperature sensor integrated at the air end
	Special maintenance of the LCP DX due to separation of cooling and server enclosures
Applications	Ideal for IT cooling of small and medium-sized locations
	One or two racks can be cooled separately

Features

Function principle	The LCP draws in the air at the sides at the rear of the server enclosures, cools it using high-performance compact impellers, and blows the cooled air back into the front part of the server enclosure at the sides Absorbed thermal energy is emitted to the ambient air at the external condenser location, without heating up the installation room
