AS 4050.095 - RiPanel Processing Center

The Rittal RiPanel Processing Center, in conjunction with Eplan software, offers an end-to-end solution for the efficient management of production and machine orders. The manufacturing management tool ensures holistic process optimization and optimizes planning reliability. This significantly reduces throughput times, errors and costs. The manufacturing management tool consists of two modules: the layout tool and job management. The library integrated in the layout tool already contains a selection of 2D modeled components from Rittal and can be extended as required. Job management enables the administration of production orders for registered Rittal machines.

Features

Model No.	AS 4050.095
Product description	The Rittal RiPanel Processing Center, in conjunction with EPLAN software, offers an end-to-end solution for the efficient management of production and machine orders. The manufacturing management tool ensures holistic process optimization and optimizes planning reliability. This significantly reduces throughput times, errors and costs.
Benefits	Comprehensive process optimization Optimizes planning reliability Reduction of lead times Fault prevention Possible to transfer production-relevant information from other CAD tools

Features

Supply includes	Cloud-based application RiPanel Processing Center Integrated job management for the managing production orders for the registered Rittal machines Integrated layout tool for configuring enclosures and mounting plates with components with production-relevant information for automated machine processing Component library with 2D Rittal components, possible to extend by creating enclosures, panels and components, as well as drilling template models
Packaging unit	1 pc(s).
CRA risk class	Default (Low Risk)
Customs tariff number	85234920
