undefined 9963.965 - IT aisle containment

Aisle containment system separates hot and cold air in the data center, increasing the efficiency of climate control systems. The solution can be designed to accommodate hot or cold aisle containment.

Features

Model No.	9963.965
Version	Individual project planning only
Product description	Slimline door element with viewing window and sliding door. Stable roof elements in a composite material with a high level of light permeability.
Benefits	Increased energy efficiency and performance capability of climate control Easily installed and retrofitted, as it is compatible with Rittal IT rack systems An efficient way to boost the performance of your existing installation, lengthening the investment cycle until a replacement needs to be purchased.
Applications	Depending on the application, aisle containment may be used with CRAC systems or LCP Inline as hot or cold aisle containment
Function principle	Aisle containment is a combination of door and roof components which facilitate consistent separation of the hot and cold air in the data center. Such separation is pivotal to saving energy and increasing the efficiency of the existing climate control technology.
Material	Carbon steel, spray finished Roof components: polycarbonate
Color	RAL 7035
