

Rittal – The System.

Faster – better – everywhere.

primeXpress

Rittal's fully automated primeXpress program can deliver high-quality enclosure modifications in a matter of days, increasing your profitability.

Modifying enclosures by hand during the build process is time consuming and can lead to inconsistencies when attempting to replicate the hand-drilled holes and cutouts over multiple units. Additionally, the risk of having rough or unfinished edges is increased which can lead to damaging accessories or wiring and reducing profits throughout each job. Rittal's primeXpress program is designed to assist in streamlining the manufacturing process through automation that enables consistent and reliable production across all units.

Modify Your Enclosures Before Receiving Them with Rittal's primeXpress Program

Thousands of standard products for virtually every application are in-stock and ready for your individual needs. Rittal's modification center is equipped to complete the necessary modifications and can ship your enclosures fast with the cutouts and drilled holes completed. Removing the manual modification process frees up time to bring in new jobs and streamline your workflow by going directly to the assembly process.

What's included in the program:

- Wallmounts, junction boxes, AX, and freestanding enclosures including SE 8 / TS 8 products in both carbon and stainless steel.
- Thousands of standard products in-stock.
- Holes, cutouts, and installation of accessories, tapped holes on mounting panels only - no PEMS or Studs.
- Baying up to 3,500 mm length, additional cost of baying hardware and FMDC interconnecting hardware will apply.
- Ready to ship in 15 days or less.
- Contact your Rittal sales representative or distribution partner for program rules, pricing, and product delivery information.

- If holes and / or cutouts are required, the order must include fully dimensioned drawings at the time of order - fully dimensioned one-to-one scale, Rev controlled.
- Accepted file formats: DWG, DXF, or files from **RiPanel** (<http://www.rittal.us/configurators>), or EPLAN drilling pattern files.
 - Drawings are to be provided in one-to-one (1:1) scale factor and located in the Model space tab of the drawing file.
 - Drawings provided in Layout or Paper space will not be accepted.

Contact your Rittal sales representative or authorized Rittal distributor today to take advantage of the Rittal primeXpress program. From concept to execution, Rittal can assist with streamlining workflows through reliable and consistent automated processes and improving your business's productivity.
